

The Benefits of Choosing Dental Implants

Dental Implants Are Built To Last

Dental implants are designed to last a lifetime. Implants can't get cavities but home care & regular dental checkups are still important to maintaining the health of your implants & the rest of your teeth!

No More Worrying About Your Teeth

With dental implants, you can smile proudly without worrying about how your smile looks or if your dentures are coming loose. Dental implants are designed to look, feel and function like your natural teeth!

Maintain Your Face Shape

Bone loss in the jaw can begin immediately after a tooth is lost. This can cause a sunken in, aged appearance as the bone deteriorates. Implants keep the jawbone healthy.

Protect Your Jawbone

When a tooth is lost, there is no more of the stimulation needed to keep the jawbone healthy and deterioration occurs. Implants act like natural teeth and help keep your jawbone healthy.

Keep Your Teeth In Your Mouth

Dentures & bridges can be a hassle to keep track of & keep clean. With dental implants, your teeth stay in your mouth - not a cup! Caring for your dental implant is the same as for your natural teeth.

Enjoy Your Favorite Foods

Dental implants enable you to bite normally & eat virtually anything you want. Unlike removable dentures, dental implants will stay firmly in your mouth so you can enjoy the foods you love!
